Functional Overview

There are multiple ways to access your Evolve IP DaaS desktop on mobile devices. Using your company DaaS URL, you are still able to log onto your desktop portal on a mobile device browser as an alternative to the VMware Horizon View client.

The second, and recommended, option is to download a VMware Horizon View Application on any mobile device.

Using Apple Devices (iPhone/iPad)

To access your DaaS desktop on Apple (iPhone/iPad) devices you need to download the free VMware Horizon Client Application. The app is easily found in the Apple Store by searching ‘VMware Horizon’. Keep in mind that your cellular carrier’s data rates for use of the application may apply:

1. Download the Horizon Client app from the Apple Store.
2. On the top right corner select the **'New'** button.
3. This will open the **'Server Setup'** menu. You will then enter the server address that is provided to you by your IT Administrator. Select **'Add Server'**
4. Once the connection is successful, you will now have an icon that will connect you to the desktop.
5. Once you select the domain your desktop log-in page will appear. Enter credentials and your will be sent to your desktop.

To log out select the  button.

Navigation Menu on Apple Devices

Below is the navigation menu that will appear when accessing your DaaS desktop on mobile Apple devices.

-  Settings
-  On Screen Trackpad
-  Help
-  Disconnect (will keep your desktop as you left it the next time you log in)
-  Switch between desktop and mobile screen interface.
-  On Screen Keyboard
-  Navigation arrows, PgUp, PgDn, Home, Esc, Shift, Del, Win, F1-F12, Ctrl, Alt, Del

While using an iPhone/iPad, your easy access menu options appear in a list. This shows all applications that are currently running and commonly used applications.

Using Android Devices

1. Download the free Horizon Client app from the Google Play Store.
2. On the top right corner select the **'New'** button.
3. This will open the **'Server Setup'** menu. You will then enter the server address that is provided to you by your IT Administrator. Select **'Add Server'**
4. Once the connection is successful, you will now have an icon with your server that will connect you to the desktop.
5. Once you select the domain your desktop log-in page will appear. Enter desktop credentials and you will be logged into your desktop.

6. To log out, select the  icon and then the  button. This will disconnect you from your Android device but will keep you logged into your desktop.
